ABSTRACT

A study conducted at Mount San Antonio College (MSAC), California, to determine trends in the number of high school graduates in the MSAC district; the percentage of high school graduates attending MSAC; retention in district high schools between the ninth and twelfth grade; high school performance on California Assessment Program (CAP) Tests; differences among students from district and non-district high schools; K-12 enrollments in public and private schools in the district; and K-12 ethnic distributions in MSAC district schools. Study findings included the following: (1) while private schools have experienced continued enrollment growth since 1971, public high school enrollments have fluctuated; (2) the percentage of district high school graduates attending MSAC dropped from 22.2% of the private high school graduates and 23.4% of the public high school graduates in 1984-85 to 20.4% of the private school graduates and 21.7% of the public school graduates in 1987-88; (3) there was an overall district loss of 2,715 students, or 22.15%, between the ninth grade in 1985 and the twelfth grade in 1988; (4) 10 district high schools and 2 continuation schools scored above the state average on the CAP reading tests and 12 high schools and 8 continuation schools were below the state average; and (5) K-12 enrollments were 1.58% higher in 1988 than in 1987. RESEARCH QUESTION ONE

RESEARCH QUESTION ONE

Are the number of high school graduates in the Mt. San Antonio College district increasing or decreasing?

ANALYSIS SUMMARY

Table 1, Page 3, shows a ten year pattern for public and private high school graduates. The private schools' pattern is clearly one of continued growth since 1971.

Public high schools have had their peaks and valleys, beginning with a high in 1975 of 8,305 students. Since then there has been a sharp 12 percent decline between 1979 and 1981, and a rise between 1981 and 1983 with another 8 percent drop to 6,966, the lowest number in the ten-year study. Since 1984 the number of public school graduates have increased slightly each year.

The summary by high schools and districts beginning on Page 6 shows a slight decrease of 26 students in the public high schools between 1987 and 1988.

This summary illustrates that only one K-12 district, Covina-Valley, has followed a ten year pattern of decline, going from a high in 1971 of 1,447 to a low in 1987 of 789. Since 1971 Covina-Valley has closed six elementary schools and one junior high school. The district had a non-mobile aging population.

In 1988 graduates increased in Baldwin Park, Bassett, Bonita, Charter Oak, Covina-Valley, Walnut Valley, and West Covina; Rowland remained the same.

Analysis Summary (Continued)

Hacienda La Puente had the largest decline, 11.8 percent, from 1987 and Pomona had an 8.8 percent drop.

In 1988 the MSAC district had a population of 12.8 percent 6 to 13 year olds, but only a 6.6 percent population of 14 to 17 year olds. This distribution was the same for the major feeder areas outside the district. During the next four years, there will be fewer high school students.

RESEARCH QUESTION TWO

RESEARCH QUESTION TWO

What percent of the first-time graduates from district schools are coming to Mt. San Antonio College?

ANALYSIS SUMMARY

Table 4, Page 11, illustrates the overall percentages of public and private high school first-time graduates coming to the College since 1984-85. The highest percentage, 22.2 percent for private and 23.4 percent for public high schools, was in 1984-85. Since then there has been a slight drop to 20.4 percent for private and 21.7 percent for public high schools in 1987-88. These overall totals include continuation and adult school graduates. *Table 5* illustrates enrollment trends for each regular high school separately. This table gives a clearer picture of enrollment trends as well as showing variances between high schools in the same district.

Table 5 shows the percent of new graduates coming to MSAC between 1985-86 and 1986-87 increased for twelve public and three private high schools. Of the ten public high schools that did not increase in 1986-87, seven increased in 1987-88.

In 1986 the College started a high school liaison program in addition to the College representative. The schools with liaisons are starred in the 1986-87, 1987-88 summaries. There has been an increase in College enrollment from ten high schools since the program started. The 1988-89 summary report will show more of a trend because 22 liaison programs will have been in operation for at least two years.

RESEARCH QUESTION THREE

RESEARCH QUESTION THREE

What is the retention in district high schools between the ninth and twelfth grade?

ANALYSIS SUMMARY

Table 6, Page 28, shows the total number of ninth, tenth, eleventh, and twelfth graders in district public high schools from 1985 to 1988. It illustrates an overall district loss of 2,715 students (25.15 percent) between the ninth grade in 1985 and the twelfth grade in 1988. A total of 8,081 students (74.85 percent) remained in the district.

Table 7 shows this same data by individual districts. Baldwin Park had the lowest retention, 47.40 percent, and Walnut Valley was 104.68 percent due to the opening of the new Diamond Bar High School.

RESEARCH QUESTION FOUR

RESEARCH QUESTION FOUR

How do students in the Mt. San Antonio College district schools do on California Assessment Program Tests?

ANALYSIS SUMMARY

The definitions on Page 33 explain the data elements used to illustrate the new California Assessment twelfth grade test results. On the new reading test for grade twelve, the emphasis has been changed from basic skills to higher ordered thinking. The new twelfth grade math test is getting away from multiple choice with a problem solving section where students may use calculators. The new twelfth grade tests reflect a major change in elementary curriculum away from the Basal Reader to one focused on literature and an emphasis on reading and writing across the curriculum. These changes will affect all the California Assessment Tests from third to twelfth grade.

In the new 1987-88 twelfth grade reading test, ten district high schools had scale scores above the state average of 250 and twelve were below. Two continuation schools were above and eight were below. In the new twelfth grade mathematics test, only seven district high schools were above the state average and fifteen were below. All the continuation schools were below. Six high schools were above state average in both reading and mathematics. They were Los Altos, Walnut, Glen Wilson, Diamond Bar, John Rowland, and West Covina.

Twelfth Grade Reading

Walnut High School had the highest reading scale score followed by Los Altos, Diamond Bar, and tied for fourth was Glen Wilson and John Rowland. Garey High School had the lowest score. Arrow had the highest continuation school

Analysis Summary (Continued)

scale score followed by North Park. Valley had the lowest.

Twelfth Grade Mathematics

Glen Wilson had the highest mathematics scale score followed by Los Altos, Diamond Bar, John Rowland, and Walnut. Chaparral Continuation had the highest math scale score followed by Santana. Nueva Vista had the lowest.

Limited English Proficiency (LEP)

Bassett High School had the highest concentration of twelfth grade students with limited English proficiency (LED), 18.4 percent. The next highest concentration was at Garey High School, 10.6 percent.

The highest concentrations of LEP students are not in district high schools, but in elementary and some junior highs. Bassett had the highest average junior high school score of 24.2 percent. The 1987-88 third grade test summary for the twelve elementary schools in Baldwin Park showed an average third grade 37.2 LEP with a range for individual schools from 16.5 to 50 percent. In Bassett the third grade average LEP was 32 percent with a range from 20.5 to 41 percent in four elementary schools and 34.2 in one middle school. Hacienda La Puente average LEP was 17 percent with a range from 3.8 to 35.8 percent in 24 elementary schools, and the Pomona average was 28 percent with a range from 4.1 to 68.8 percent in 13 elementary schools. Rowland averaged 17.5 percent with a range from 0 to 57.5 percent in 15 elementary schools.

Aid to Families with Dependent Children (AFDC)

The AFDC pattern in district schools is similar to the LEP. The concentrations are primarily in the elementary schools. In the high schools the highest percents are in the Pomona district at Garey with 28.4 percent, Pomona with 25 percent, and Ganesha with 22.7 percent.

75

Analysis Summary (Continued)

In the third grade elementary schools, Baldwin Park averaged 20.6 percent with a range from 15.6 to 23.8. Bassett averaged 18.6 percent with a range from 15.7 to 21.9. Hacienda La Puente averaged 11.9 with a range from 1.4 to 21.3 percent. Rowland averaged 9.4 with a range from 2.3 to 19.4 percent. Pomona averaged 20.5 with a range from 19.9 to 38.9 percent.

California Assessment Program 1987-88

On the new reading test for grade twelve, the emphasis has been changed from basic skills to higher ordered thinking. The new math test is getting away from multiple choice with a section of five items where students have to solve problems. They may use calculators.

New tests for grade three will start in 1991. There has been a tremendous change in the elementary reading program. There are two new emphasis. The first is a reading program based on literature rather than the Basal Reader. The second is the emphasis on reading and writing across the curriculum.

Definitions

SS = Scale score range 100-400, average 250.

SR = State rank 1-99 percentile, average 50.

RR = Relative rank. To develop this rank, the four background factors for each school are graphed in relationship to other schools. Ten percent below and ten percent above becomes a group. Then the scale scores of that group of schools are ordered against the background factors.

Background Factors

SES = Is determined in the third and sixth grade by the teacher. It is based on the parents occupation.

In the eighth and the twelfth grade, it is determined by the average of the students' parents educational level.

5 = advanced degree
4 = college graduate
3 = some college
2 = high school graduate
1 = no graduation from high school

California Assessment Program 1987-88 (Continued)

AFDC = Aid to Families with Dependent Children.

LEP = Limited English Proficiency.

RESEARCH QUESTION FIVE

RESEARCH QUESTION FIVE

How do students from district and non-district high schools compare in age, sex, ethnicity, number of units attempted and completed, and G.P.A.?

ANALYSIS SUMMARY

The data summarized in *Table 8* on Page 40 is from the Computer Services SGNP6000 High School Feeder Information Report prepared each year for district principals and superintendents to show them how students from their high schools are doing at Mt. San Antonio College.

The report includes only students who completed coursework during the school year. The district and non-district totals in the summary include first year students, new graduates, other first year students, and continuing students. For the last four years, more students have completed coursework who attended out of district high schools than those who attended in the district. These students may live in the district at the present time, but they attended a high school outside the district. They are older. Their average age in 1984-85 was 30.28 going down to 29.12 in 1987-88. There are more females than males. They have a significantly higher G.P.A. They attempt fewer units, but have a very high completion rate. Among them may be reverse transfers and students with degrees. For the last four years, the ethnic pattern has remained the same. There are more Asians and Blacks and fewer Hispanics from non-district high schools.

The 1987-88 coursework completion comparison of credit students who attended district and non-district high schools on Page 41 shows last year's district/non-district comparison in more detail. First year students new graduates from district and non-district high schools had a very close G.P.A., 2.04 versus 2.06. First year students took more units.

Analysis Summary (Continued)

More first year students new graduates, 46.5 percent more, attended district high schools, but 63.2 percent more other first year students attended high schools outside the district.

(Table 8)

RESEARCH QUESTION SIX

RESEARCH QUESTION SIX

How many students are enrolled in MSAC K-12 school districts, and how many students are enrolled in district area private high schools?

ANALYSIS SUMMARY

Table 9, Page 43, shows that Fall 1988 had a 1.58 percent increase in the total K-12 district enrollment over Fall 1987. Eight districts increased overall enrollment ranging from Walnut with 7.98 percent to 0.89 percent for Charter Oak. Two districts decreased, Hacienda La Puente dropped -7.15 percent and West Covina dropped -1.53 percent.

When we look at district school populations, it is important to also look at the present population age groups in the 18 zip codes in the College district. Total district population is growing and is projected to grow through 1993, but the percent of the population in the 0-5, 6-13, 14-17 age groups has decreased sharply since the 1970 and the 1980 census and are projected to decrease to 1993. Recent demographic studies of the district show a large population of mobile families with children and at the childbearing age. How long their families will remain in the district depends on a number of environmental variables over which the College has no control.

There is a trend toward more private high school enrollment. Overall enrollment as *Table 10* illustrates has increased 13.66 percent Fall 1988 over Fall 1987. Fall 1988 enrollment in private school ninth grade increased 17.71 percent and tenth grade increased 15.96 percent over Fall 1987.

RESEARCH QUESTION SEVEN

RESEARCH QUESTION SEVEN

What are the ethnic groups in MSAC K-12 district schools? What are the ethnic groups in MSAC district area private high schools?

ANALYSIS SUMMARY

The changing ethnicity of the MSAC district school population is reflected in *Table 11* on Page 48. In 1985 American Indian, Alaskan Natives, Asians, Blacks, and Hispanics represented 59.84 percent of the K-12 district school population. By Fall 1988 they represented 66.89 percent. Six of the ten K-12 districts in the College district now have majority minority populations.

The largest population district-wide is Hispanic, 45.73 percent. The second largest is White with 33.11 percent and the third is Asian with 8.99 percent. Black non-Hispanic is the fourth with 8.22 percent, followed by Filipino, 3.42 percent, and Pacific Islanders, .21 percent.

Bassett Unified has the largest Hispanic population, 81.87 percent, followed by Baldwin Park with 78.50 percent. Hacienda La Puente has 56.25 percent and Pomona has 46.97 percent. It must be noted, however, that the most current data available from the Pomona School District was as of October 1986 and included Headstart and preschool students.

The largest Asian population, 20.70 percent, is in the Walnut School District with the second of 13.86 percent in the Hacienda La Puente District and the third in the Rowland District with 12.08 percent.

Analysis Summary (Continued)

Table 12, Page 50, shows two of the six private high schools also have a majority minority population. Overall, the private high schools have 43.24 percent White, 39.61 percent Hispanic, 12 percent Asian/Pacific Islander/Filipino, and 4.31 percent Black Non-Hispanic.
